## PRICING NOTES

- <sup>1</sup> Each Aruba Supervisor Card, 800 and 2400 platform ships with the appropriate version of General Availability ArubaOS<sup>(tm)</sup> software as standard.
- <sup>2</sup> Each Aruba 6000 series line card (LC-2G24F, LC-2G24FP or LC-2G) or 2400 series mobility controller requires the purchase of at least 1 x GBIC adapter to provide physical interface connectivity to the
- <sup>3</sup> Aruba application software packages may be optionally purchased and installed on any Aruba platform in order to achieve the desired level of functionality. The Aruba platforms are capable of supporting multiple or all applications simultaneously.
- <sup>4</sup> Electrical surge protection equipment (in-line filters etc) are recommended for use with access points in outdoor installations.
- <sup>5</sup> All documentation set purchases are only available when purchased with an Aruba wireless switching platform.
- <sup>6</sup> The required country specific AC power cords must be specified separately on sales order. They are supplied Free of Charge with any 800, 2400 or 6000 PSU order.
- <sup>7</sup> Campus access points typically ship without an AC power adapter. Please order power adapter kit separately if AC power is required. See applicable AP configuration guide for valid AC power adapter options.
- <sup>8</sup> Most access point and mesh router models that support detachable antennas ship without the actual antennas. Please order suitable antenna(s) separately. See applicable AP configuration guide for valid antenna options.
- <sup>10</sup> Remote AP licenses are cumulative.
- <sup>11</sup> Indoor access point products (AP-92/93, AP-93H, AP-104/105, AP-134/135, AP-224/5, RAP-155 RAP-3WN/3WNP and RAP-5WN) and mobility access switch products (S3500 and S2500) are covered by Aruba's Limited Lifetime Warranty.. For the life of the product, defined as up to five years after Aruba announces the product's end of sale, Aruba warrants that the products will substantially conform to Aruba's documentation. This warranty is non-transferable except in the case of a change of control. For more details on the warranty terms and exclusions see Aruba's website at [www.arubanetworks.com](http://www.arubanetworks.com)

#### REMOTE ACCESS POINT SOFTWARE

ARUBA REMOTE ACCESS POINT SOFTWARE is an optional addition to ArubaOS functionality that supports secure remote deployment of Aruba Access Points over a untrusted (internet) WAN. These modules can be added through a software upgrade to any Supervisor Card. Licenses are per access point, and cumulative. Thus, multiple Remote AP licenses can be purchased for each Supervisor Card.

## ARUBA CONTROLLER APPLICATION SOFTWARE MODULES (ARUBAOS 5.0)

Aruba Wireless Networks' application software modules allow functionality and capability to be custom tailored to suit individual wireless networking needs. The following Aruba application software modules may be purchased for any Aruba Controller running ArubaOS to create an optimal configuration.

### ArubaOS (STANDARD WITH ALL CONTROLLERS)

The base ArubaOS operating system (supplied as standard with every Aruba Controller) is a WLAN switching and service ready operating system capable of running on any Aruba Controller (804, 800, 2400 and 6000 series). The base ArubaOS functionality consists of the ARUBA RF MANAGEMENT application (wireless employee, guest and voice service, L2/L3 switching, Access Point termination, wireless 802.1x, MAC based authentication, local user database and advanced wireless management: site survey, Adaptive Radio Management (ARM) RF environment manager, RF planning), support for 3rd party APs and a WEB UI management interface, Rogue AP detection, and Secure Enterprise Mesh for Indoor Access Points. Support for redundancy is included (requires a redundant system). In addition to the base ArubaOS functionality, additional software modules as described below can be added by software upgrade to any Aruba Controller.

### ARUBA SECURITY SOFTWARE BUNDLES

Security Software Bundles include Policy Enforcement Firewall Module and Wireless Intrusion Protection Module licenses for the respective platform.

<b>ARUBA CONTROLLER APPLICATION SOFTWARE MODULES (PRE-ARUBAOS 5.0)</b>			

Aruba Wireless Networks' application software modules allow functionality and capability to be custom tailored to suit individual wireless networking needs. The following Aruba application software modules may be purchased for any Aruba Controller running ArubaOS to create an optimal configuration.

#### ArubaOS (STANDARD WITH ALL CONTROLLERS)

The base ArubaOS operating system (supplied as standard with every Aruba Controller) is a WLAN switching and service ready operating system capable of running on any Aruba Controller (804, 800, 2400 and 6000 series). The base ArubaOS functionality consists of the ARUBA RF MANAGEMENT application (wireless employee, guest and voice service, L2/L3 switching, Access Point termination, wireless 802.1x, MAC based authentication, local user database and advanced wireless management: site survey, Adaptive Radio Management (ARM) RF environment manager, RF planning), support for 3rd party APs and a WEB UI management interface, Rogue AP detection, and Secure Enterprise Mesh for Indoor Access Points. Support for redundancy is included (requires a redundant system). In addition to the base ArubaOS functionality, additional software modules as described below can be added by software upgrade to any Aruba Controller.

#### ARUBA SECURITY SOFTWARE BUNDLES

Security Software Bundles include Policy Enforcement Firewall Module and Wireless Intrusion Protection Module licenses for the respective platform.

LIC-200-SEC	Security Software Bundle for A200 (8 AP License)	SW	805.00

### ARUBA WIRELESS ACCESS POINTS (FIPS/TAA Compliant)

For any organization that requires FIPS-validated WLAN architectures, any Aruba Networks access point can be deployed in Campus, Mesh and Remote Networking modes in a FIPS compliant manner, and do not require the FIPS-specific AP models. Campus, Mesh and Remote Networking deployments take advantage of Aruba's centralized cryptology processing architecture where the Aruba Controller -- and not the access point-- performs WLAN cryptology functions which ensures a FIPS compliant end-to-end cryptology boundary.

Aruba does offer FIPS-validated access points where the access point may have to perform cryptology for two special-case situations: Mesh Bridging and Remote Network Split Tunneling. In the case of Mesh Bridging, the access point is deployed to bridge traffic from a wired Ethernet network or device to the WLAN. The "wired network" traffic passing through the access point's Ethernet port needs to be encrypted, thus requiring the access point to be FIPS validated. Remote Network Split Tunneling mode is a special operation of Aruba's Remote Networking capability, where it may be desirable for Internet-destined traffic to pass directly to the Internet host as opposed to having to pass through the HQ organization's controller first. In this case, the access point must perform cryptology functions on Internet-destined traffic before leaving the remote network, thus requiring FIPS validation on the AP.
